

## Tens Facts

### Purpose:

The purpose of this activity is to help your child learn addition facts with multiples of ten. For example,  $70 + 70 = 140$ .

### Link to Number Framework:

Number Facts, Stage 5.

### What you need:

- A set of cards with the face cards and number ten in each suit removed.
- 2 pieces of paper, with a "0" drawn on the right hand side.

### What to do:

- Shuffle the cards and place them in a pile face down.
- Take 2 cards and place them on the left hand side of each piece of paper. This forms 2 numbers that are multiples of ten. For example 70 and 60 are shown as:

- Ask your child to add the 2 numbers together.
- Repeat using other cards to make other addition problems. Take turns with your child to deal out the cards and solve the problems.

### What to expect your child to do:

- Use the addition facts they know to help them find the answers. For example, if they know  $4 + 8$  is 12, they can use this to identify that  $40 + 80 = 120$ .
